# Contents

# Chapter 1

## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Graph . . . . .	??
Dijkstra . . . . .	??
NetworkDijkstra . . . . .	??
RoadNetwork . . . . .	??
NetworkDijkstra . . . . .	??
Link . . . . .	??

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">Dijkstra</a>	.....	??
<a href="#">Graph</a>	.....	??
<a href="#">Link</a>	.....	??
<a href="#">NetworkDijkstra</a>	.....	??
<a href="#">RoadNetwork</a>	.....	??

## Chapter 3

# Class Documentation

### 3.1 Dijkstra Class Reference

Inheritance diagram for Dijkstra:

### 3.2 Graph Class Reference

Inheritance diagram for Graph:

#### Public Member Functions

- virtual void [addEdge](#) (node\_type i, node\_type j)  
*[Graph](#) initialization. Adding a edge between the vertices *i* and *j*.*
- virtual void [setWeight](#) (node\_type i, node\_type j, dist\_type dist)  
*Weight initialization. Setting the weight between the vertices *i* and *j*.*
- virtual dist\_type [getWeight](#) (node\_type i, node\_type j)  
*Getting the weight between the vertices *i* and *j*.*
- vector< node\_type > \* [successors](#) (node\_type i)  
*Return all the successors of vertice *i*.*
- void **addEdgeWeighted** (node\_type i, node\_type j, dist\_type dist)
- set< node\_type > **vertices** ()

#### 3.2.1 Member Function Documentation

### 3.2.1.1 addEdge()

```
void Graph::addEdge (
    node_type i,
    node_type j ) [virtual]
```

[Graph](#) initialization. Adding a edge between the vertices i and j.

The graph class contains the graph It is an interface to implement in the class graph.cpp

The documentation for this class was generated from the following files:

- graph.h
- graph.cpp

## 3.3 Link Class Reference

### Public Member Functions

- double **travel\_time** (double flow)

### Public Attributes

- double **capacity**
- double **free\_flow\_time**

The documentation for this class was generated from the following file:

- road\_network.h

## 3.4 NetworkDijkstra Class Reference

Inheritance diagram for NetworkDijkstra:

Collaboration diagram for NetworkDijkstra:

### Additional Inherited Members

The documentation for this class was generated from the following file:

- test.cpp

## 3.5 RoadNetwork Class Reference

Inheritance diagram for RoadNetwork:

Collaboration diagram for RoadNetwork:

### Public Member Functions

- void **read\_from\_csv** (string filename)
- void **read\_from\_tntp** (string filename)

### Public Attributes

- unordered\_map< link\_type, [Link](#) > **links**
- unordered\_map< link\_type, double > \* **link\_flows**

### 3.5.1 Member Function Documentation

#### 3.5.1.1 read\_from\_tntp()

```
void RoadNetwork::read_from_tntp (
    string filename )
```

INPUTS:

Filename in CSV format delimited by tabs ().

OUTPUTS:

Struct containing the titles of each column and the csv as vector<vector<double>>.

### 3.5.2 Member Data Documentation

#### 3.5.2.1 links

```
unordered_map<link_type, Link> RoadNetwork::links
```

The Road network class contains the road network It is an interface to implement in the class road\_network.cpp

The documentation for this class was generated from the following files:

- road\_network.h
- road\_network.cpp
